

SERVICE OVERVIEW

Guided Enrollment & Tracking

A self-service portal for your users. A status view for your project team.

WHY IT HELPS

One email explains one path. A real passkey move has several user groups and devices. Without guidance users get stuck, and without status the team chases everyone again.

The screenshot displays a web portal titled "Security settings portal" with a language selector (ET, EN, RU), a FAQ link, a "Need help" link, and a "Sign out" link. The main content area features a section titled "ACCOUNT SECURITY SETTINGS UPDATE" with the heading "Update your sign-in verification settings". Below the heading, it states "This helps you sign in more safely." and provides two buttons: "Start" and "Why is this needed?". To the right is an illustration of a smartphone displaying a lock screen and a background interface with security icons and a toggle switch. Below the buttons, there are three numbered steps: 01 Fewer SMS codes (Signing in is simpler and faster.), 02 Safer sign-in (It is harder for attackers to trick you.), and 03 Step-by-step help (We show what to click.). At the bottom of the portal, a note states: "Start screen. Content, languages and branding are adapted to your organisation."

FOR YOUR USERS

- ✓ Sign in with the work account and see at once what to do
- ✓ Step-by-step guidance for their own device
- ✓ Only the passkey options your organisation allows
- ✓ Content in the languages your people work in
- ✓ Help or come back later at any time

FOR YOUR PROJECT TEAM

- ✓ Status of every user, updated automatically
- ✓ Done means signed in with the new method
- ✓ Users who need help and approved exceptions visible
- ✓ Follow-up only for the users who are left

ADAPTED TO YOU

Content, languages, user groups, allowed passkey methods and your branding.

A GOOD FIT WHEN

You have many users, several device types or user groups, and follow-up by email and spreadsheets no longer works.
